Authentic Practice Tests 学术类

Test3–listening–part1

Questions 1–10

Complete the table below.

Write **ONE WORD AND/OR A NUMBER** for each answer.

Furniture Rental Companies		
Name of company	Information about costs	Additional notes
Peak Rentals	Prices range from \$105 to \$ 1 per room per month	The furniture is very 2 Delivers in 1–2 days Special offer: free 3 with every living room set
4 and Oliver	Mid-range prices 12% monthly fee for 5	Also offers a cleaning service
Larch Furniture	Offers cheapest prices for renting furniture and 6 items	Must have own 7 Minimum contract length: six months
8 Rentals	See the 9 for the most up-to-date prices	10 are allowed within 7 days of delivery

Test3–listening–part2

Questions 11–16

Choose the correct letter, **A**, **B** or **C**.

11 Who was responsible for starting the community project?

- A.the castle owners
- B.a national charity
- C.the local council

12 How was the gold coin found?

- A.Heavy rain had removed some of the soil.
- B.The ground was dug up by wild rabbits.
- C.A person with a metal detector searched the area.

13 What led the archaeologists to believe there was an ancient village on this site?

- A.the lucky discovery of old records

- B.the bases of several structures visible in the grass
- C.the unusual stones found near the castle

14 What are the team still hoping to find?

- A.everyday pottery
- B.animal bones
- C.pieces of jewellery

15 What was found on the other side of the river to the castle?

- A.the remains of a large palace
- B.the outline of fields
- C.a number of small huts

16 What do the team plan to do after work ends this summer?

- A.prepare a display for a museum
- B.take part in a television programme
- C.start to organise school visits

Questions 17–20

Label the map below.

Drag the correct letter, A–G, next to Questions 17–20.

Bidcaster Archaeological Dig

Column 1	A	B	C	D	E	F	G
17. bridge foundations							
18. rubbish pit							
19. meeting hall							
20. fish pond							

Test3–listening–part3

Questions 21–26

Choose the correct letter, A, B or C.

21 Finn was pleased to discover that their topic

- A.was not familiar to their module leader.
- B.had not been chosen by other students.
- C.did not prove to be difficult to research.

22.Maya says a mistaken belief about theatre programmes is that

- A.theatres pay companies to produce them.
- B.few theatre-goers buy them nowadays.
- C.they contain far more adverts than previously.

23 Finn was surprised that, in early British theatre, programmes

- A.were difficult for audiences to obtain.
- B.were given out free of charge.
- C.were seen as a kind of contract.

24 Maya feels their project should include an explanation of why companies of actors

- A.promoted their own plays.
- B.performed plays outdoors.
- C.had to tour with their plays.

25 Finn and Maya both think that, compared to nineteenth-century programmes, those from the eighteenth century

- A.were more original.
- B.were more colourful.
- C.were more informative.

26 Maya doesn't fully understand why, in the twentieth century,

- A.very few theatre programmes were printed in the USA.
- B.British theatre programmes failed to develop for so long.
- C.theatre programmes in Britain copied fashions from the USA.

Questions 27–30

What comment is made about the programme for each of the following shows?

Choose **FOUR** answers from the box and write the correct letter, **A–F**, next to Questions 27–30.

show	
27 Ruy Blas	27
28 Man of La Mancha	28
29 The Tragedy of Jane Shore	29
30 The Sailors' Festival	30

Comments about programme
A. Its origin is somewhat controversial.
B. It is historically significant for a country.
C. It was effective at attracting audiences.
D. It is included in a recent project.
E. It contains insights into the show.
F. It resembles an artwork.

Test3–listening–part4

Questions 31–40

Complete the notes below.

Write **ONE WORD ONLY** for each answer.

Inclusive design

Definition

- Designing products that can be accessed by a diverse range of people without the need for any
- Not the same as universal design: that is design for everyone, including catering for people with problems.

Examples of inclusive design

- which are adjustable, avoiding back or neck problems
- in public toilets which are easier to use
- To assist the elderly:
 - designers avoid using in interfaces
 - people can make commands using a mouse, keyboard or their

Impact of non-inclusive designs

- Access
 - Loss of independence for disabled people.
- Safety
 - Seatbelts are especially problematic for women.
 - PPE jackets are often unsuitable because of the size of women's
 - PPE for female officers dealing with emergencies is the worst.
- Comfort in the workplace
 - The in offices is often too low for women.

答案:

1、239|two hundred thirty-nine|two hundred and thirty-nine 2、modern 3、lamp 4、Aaron 5、damage 6、electronic 7、insurance 8、space|Space 9、app 10、exchanges

11.B 12.A 13.A 14.C 15.B 16.C

21.B 22.A 23.C 24.A 25.C 26.B
27、F 28、E 29、B 30、D

31、adaptation 32、cognitive 33、desks 34、taps 35、blue 36、voice 37、pregnant 38、shoulders
39、police 40、temperature

Test3–reading–passage1

Frozen Food

A US perspective on the development of the frozen food industry

At some point in history, humans discovered that ice preserved food. There is evidence that winter ice was stored to preserve food in the summer as far back as 10,000 years ago. Two thousand years ago, the inhabitants of South America's Andean mountains had a unique means of conserving potatoes for later consumption. They froze them overnight, then trampled them to squeeze out the moisture, then dried them in the sun. This preserved their nutritional value—if not their aesthetic appeal.

Natural ice remained the main form of refrigeration until late in the 19th century. In the early 1800s, ship owners from Boston, USA, had enormous blocks of Arctic ice towed all over the Atlantic for the purpose of food preservation. In 1851, railroads first began putting blocks of ice in insulated rail cars to send butter from Ogdensburg, New York, to Boston.

Finally, in 1870, Australian inventors found a way to make 'mechanical ice'. They used a compressor to force a gas—ammonia at first and later Freon—through a condenser. The compressed gas gave up some of its heat as it moved through the condenser. Then the gas was released quickly into a low-pressure evaporator coil where it became liquid and cold. Air was blown over the evaporator coil and then

this cooled air passed into an insulated compartment, lowering its temperature to freezing point.

Initially, this process was invented to keep Australian beer cool even in hot weather. But Australian cattlemen were quick to realize that, if they could put this new invention on a ship, they could export meat across the oceans. In 1880, a shipment of Australian beef and mutton was sent, frozen, to England. While the food frozen this way was still palatable, there was some deterioration. During the freezing process, crystals formed within the cells of the food, and when the ice expanded and the cells burst, this spoiled the flavor and texture of the food.

The modern frozen food industry began with the indigenous Inuit people of Canada. In 1912, a biology student in Massachusetts, USA, named Clarence Birdseye, ran out of money and went to Labrador in Canada to trap and trade furs. While he was there, he became fascinated with how the Inuit would quickly freeze fish in the Arctic air. The fish looked and tasted fresh even months later.

Birdseye returned to the USA in 1917 and began developing mechanical freezers capable of quick-freezing food. Birdseye methodically kept inventing better freezers and gradually built a business selling frozen fish from Gloucester, Massachusetts. In 1929, his business was sold and became General Foods, but he stayed with the company as director of research, and his division continued to innovate.

Birdseye was responsible for several key innovations that made the frozen food industry possible. He developed quick-freezing techniques that reduced the damage that crystals caused, as well as the technique of freezing the product in the

package it was to be sold in. He also introduced the use of cellophane, the first transparent material for food packaging, which allowed consumers to see the quality of the product. Birdseye products also came in convenient size packages that could be prepared with a minimum of effort.

But there were still obstacles. In the 1930s, few grocery stores could afford to buy freezers for a market that wasn't established yet. So, Birdseye leased inexpensive freezer cases to them. He also leased insulated railroad cars so that he could ship his products nationwide. However, few consumers had freezers large enough or efficient enough to take advantage of the products.

Sales increased in the early 1940s, when World War II gave a boost to the frozen food industry because tin was being used for munitions. Canned foods were rationed to save tin for the war effort, while frozen foods were abundant and cheap. Finally, by the 1950s, refrigerator technology had developed far enough to make these appliances affordable for the average family. By 1953, 33 million US families owned a refrigerator, and manufacturers were gradually increasing the size of the freezer compartments in them.

1950s families were also looking for convenience at mealtimes, so the moment was right for the arrival of the 'TV Dinner'. Swanson Foods was a large, nationally recognized producer of canned and frozen poultry. In 1954, the company adapted some of Birdseye's freezing techniques, and with the help of a clever name and a huge advertising budget, it launched the first 'TV Dinner'. This consisted of frozen turkey, potatoes and vegetables served in the same segmented aluminum tray that was used by airlines. The product was an instant success. Within a year, Swanson

had sold 13 million TV dinners. American consumers couldn't resist the combination of a trusted brand name, a single-serving package and the convenience of a meal that could be ready after only 25 minutes in a hot oven. By 1959, Americans were spending \$2.7 billion annually on frozen foods, and half a billion of that was spent on ready-prepared meals such as the TV Dinner.

Today, the US frozen food industry has a turnover of over \$67 billion annually, with \$26.6 billion of that sold to consumers for home consumption. The remaining \$40 billion in frozen food sales come through restaurants, cafeterias, hospitals and schools, and that represents a third of the total food service sales.

Questions 1–7

Complete the notes below.

Choose **ONE WORD ONLY** from the passage for each answer.

The history of frozen food

2,000 years ago, South America

- People conserved the nutritional value of , using a method of freezing then drying.

1851, USA

- was kept cool by ice during transportation in specially adapted trains.

1880, Australia

- Two kinds of were the first frozen food shipped to England.

1917 onwards, USA

- Clarence Birdseye introduced innovations including:
 - quick-freezing methods, so that did not spoil the food.
 - packaging products with , so the product was visible.

Early 1940s, USA

- Frozen food became popular because of a shortage of .

1950s, USA

- A large number of homes now had a .

Questions 8–13

Do the following statements agree with the information given in Reading Passage 1?

- TRUE if the statement agrees with the information
FALSE if the statement contradicts the information

NOT GIVEN if there is no information on this

- 8 The ice transportation business made some Boston ship owners very wealthy in the early 1800s.
- 9 A disadvantage of the freezing process invented in Australia was that it affected the taste of food.
- 10 Clarence Birdseye travelled to Labrador in order to learn how the Inuit people froze fish.
- 11 Swanson Foods invested a great deal of money in the promotion of the TV Dinner.
- 12 Swanson Foods developed a new style of container for the launch of the TV Dinner.
- 13 The US frozen food industry is currently the largest in the world.

Test3–reading–passage2

Can the planet's coral reefs be saved?

A

14

Conservationists have put the final touches to a giant artificial reef they have been assembling at the world-renowned Zoological Society of London (London Zoo). Samples of the planet's most spectacular corals – vivid green branching coral, yellow scroll, blue ridge and many more species – have been added to the giant tank along with fish that thrive in their presence: blue tang, clownfish and many others. The reef is in the zoo's new gallery, Tiny Giants, which is dedicated to the minuscule invertebrate creatures that sustain life across the planet. The coral reef tank and its seven-metre-wide window form the core of the exhibition.

‘Coral reefs are the most diverse ecosystems on Earth and we want to show people how wonderful they are,’ said Paul Pearce-Kelly, senior curator of invertebrates and fish at the Zoological Society of London. ‘However, we also want to highlight the research and conservation efforts that are now being carried out to try to save them from the threat of global warming.’ They want people to see what is being done to try to save these wonders.

B

15

Corals are composed of tiny animals, known as polyps, with tentacles for capturing small marine creatures in the sea water. These polyps are transparent but get their brilliant tones of pink, orange, blue, green, etc. from algae that live within them, which in turn get protection, while their photosynthesising of the sun’s rays provides nutrients for the polyps. This comfortable symbiotic relationship has led to the growth of coral reefs that cover 0.1% of the planet’s ocean bed while providing homes for more than 25% of marine species, including fish, molluscs, sponges and shellfish.

C

16

As a result, coral reefs are often described as the ‘rainforests of the sea’, though the comparison is dismissed by some naturalists, including David Attenborough. ‘People say you cannot beat the rainforest,’ Attenborough has stated. ‘But that is

simply not true. You go there and the first thing you think is: where ... are the birds? Where are the animals? They are hiding in the trees, of course. No, if you want beauty and wildlife, you want a coral reef. Put on a mask and stick your head under the water. The sight is mind-blowing.'

D

17

Unfortunately, these majestic sights are now under very serious threat, with the most immediate problem coming in the form of thermal stress. Rising ocean temperatures are triggering bleaching events that strip reefs of their colour and eventually kill them. And that is just the start. Other menaces include ocean acidification, sea level increase, pollution by humans, deoxygenation and ocean current changes, while the climate crisis is also increasing habitat destruction. As a result, vast areas – including massive chunks of Australia's Great Barrier Reef – have already been destroyed, and scientists advise that more than 90% of reefs could be lost by 2050 unless urgent action is taken to tackle global heating and greenhouse gas emissions.

Pearce-Kelly says that coral reefs have to survive really harsh conditions – wave erosion and other factors. And 'when things start to go wrong in the oceans, then corals will be the first to react. And that is exactly what we are seeing now. Coral reefs are dying and they are telling us that all is not well with our planet.'

E

However, scientists are trying to pinpoint hardy types of coral that could survive our overheated oceans, and some of this research will be carried out at London Zoo. ‘Behind our ... coral reef tank we have built laboratories where scientists will be studying coral species,’ said Pearce-Kelly. One aim will be to carry out research on species to find those that can survive best in warm, acidic waters. Another will be to try to increase coral breeding rates. ‘Coral spawn just once a year,’ he added. ‘However, aquarium-based research has enabled some corals to spawn artificially, which can assist coral reef restoration efforts. And if this can be extended for all species, we could consider the launching of coral-spawning programmes several times a year. That would be a big help in restoring blighted reefs.’

F

Research in these fields is being conducted in laboratories around the world, with the London Zoo centre linked to this global network. Studies carried out in one centre can then be tested in others. The resulting young coral can then be displayed in the tank in Tiny Giants. ‘The crucial point is that the progress we make in making coral better able to survive in a warming world can be shown to the public and encourage them to believe that we can do something to save the planet’s reefs,’ said Pearce-Kelly. ‘Saving our coral reefs is now a critically important ecological goal.’

Reading Passage 2 has six sections, A–F.

Choose the correct heading for each section from the list of headings below.

- i. Tried and tested solutions
- ii. Cooperation beneath the waves
- iii. Working to lessen the problems
- iv. Disagreement about the accuracy of a certain phrase
- v. Two clear educational goals
- vi. Promoting hope
- vii. A warning of further trouble ahead

Questions 20 and 21

Choose TWO letters, A–E.

20 - 21

Which TWO of these causes of damage to coral reefs are mentioned by the writer of the text?

- A. a rising number of extreme storms
- B. the removal of too many fish from the sea
- C. the contamination of the sea from waste
- D. increased disease among marine species
- E. alterations in the usual flow of water in the seas

Questions 22 and 23

Choose TWO letters, A–E.

22 - 23

Which TWO of the following statements are true of the researchers at London Zoo?

- A. They are hoping to expand the numbers of different corals being bred in laboratories.
- B. They want to identify corals that can cope well with the changed sea conditions.
- C. They are looking at ways of creating artificial reefs that corals could grow on.
- D. They are trying out methods that would speed up reproduction in some corals.
- E. They are investigating materials that might protect reefs from higher temperatures.

Complete the sentences below.

Choose ONE WORD ONLY from the passage for each answer.

24 Corals have a number of which they use to collect their food.

25 Algae gain from being inside the coral.

26 Increases in the warmth of the sea water can remove the

from coral.

Test3–reading–passage3

Robots and us

Three leaders in their fields answer questions about our relationships with robot

When asked ‘Should robots be used to colonise other planets?’, cosmology and astrophysics Professor Martin Rees said he believed the solar system would be mapped by robotic craft by the end of the century. ‘The next step would be mining of asteroids, enabling fabrication of large structures in space without having to bring all the raw materials from Earth. ... I think this is more realistic and benign than the ... “terraforming”^{*} of planets.’ He maintains that colonised planets ‘should be preserved with a status that is analogous to Antarctica here on Earth.’

On the question of using robots to colonise other planets and exploit mineral resources, engineering Professor Daniel Wolpert replied, ‘I don’t see a pressing need to colonise other planets unless we can bring [these] resources back to Earth. The vast majority of Earth is currently inaccessible to us. Using robots to gather resources nearer to home would seem to be a better use of our robotic tools.’

Meanwhile, for anthropology Professor Kathleen Richardson, the idea of ‘colonisation’ of other planets seemed morally dubious: ‘I think whether we do something on Earth or on Mars we should always do it in the spirit of a genuine interest in “the Other”, not to impose a particular model, but to meet “the Other”.’

In response to the second question, ‘How soon will machine intelligence outstrip human intelligence?’, Rees mentions robots that are advanced enough to beat

humans at chess, but then goes on to say, 'Robots are still limited in their ability to sense their environment: they can't yet recognise and move the pieces on a real chessboard as cleverly as a child can. Later this century, however, their more advanced successors may relate to their surroundings, and to people, as adeptly as we do. Moral questions then arise. ... Should we feel guilty about exploiting [sophisticated robots]? Should we fret if they are underemployed, frustrated, or bored?'

Wolpert's response to the question about machine intelligence outstripping human intelligence was this: 'In a limited sense it already has. Machines can already navigate, remember and search for items with an ability that far outstrips humans. However, there is no machine that can identify visual objects or speech with the reliability and flexibility of humans. ... Expecting a machine close to the creative intelligence of a human within the next 50 years would be highly ambitious.'

Richardson believes that our fear of machines becoming too advanced has more to do with human nature than anything intrinsic to the machines themselves. In her view, it stems from humans' tendency to personify inanimate objects: we create machines based on representations of ourselves, imagine that machines think and behave as we do, and therefore see them as an autonomous threat. 'One of the consequences of thinking that the problem lies with machines is that ... we tend to imagine they are greater and more powerful than they really are and subsequently they become so.'

This led on to the third question, 'Should we be scared by advances in artificial intelligence?' To this question, Rees replied, 'Those who should be worried are the

futurologists who believe in the so-called “singularity”.** ... And another worry is that we are increasingly dependent on computer networks, and that these could behave like a single “brain” with a mind of its own, and with goals that may be contrary to human welfare. I think we should ensure that robots remain as no more than “idiot savants” lacking the capacity to outwit us, even though they may greatly surpass us in the ability to calculate and process information.’

Wolpert’s response was to say that we have already seen the damaging effects of artificial intelligence in the form of computer viruses. ‘But in this case,’ he says, ‘the real intelligence is the malicious designer. Critically, the benefits of computers outweigh the damage that computer viruses cause. Similarly, while there may be misuses of robotics in the near future, the benefits that they will bring are likely to outweigh these negative aspects.’

Richardson’s response to this question was this: ‘We need to ask why fears of artificial intelligence and robots persist; none have in fact risen up and challenged human supremacy.’ She believes that as robots have never shown themselves to be a threat to humans, it seems unlikely that they ever will. In fact, she went on, ‘Not all fear [robots]; many people welcome machine intelligence.’

In answer to the fourth question, ‘What can science fiction tell us about robotics?’, Rees replied, ‘I sometimes advise students that it’s better to read first-rate science fiction than second-rate science – more stimulating, and perhaps no more likely to be wrong.’

As his response, Wolpert commented, ‘Science fiction has often been remarkable at predicting the future. ... Science fiction has painted a vivid spectrum of possible futures, from cute and helpful robots to dystopian robotic societies. Interestingly, almost no science fiction envisages a future without robots.’

Finally, on the question of science fiction, Richardson pointed out that in modern society, people tend to think there is reality on the one hand, and fiction and fantasy on the other. She then explained that the division did not always exist, and that scientists and technologists made this separation because they wanted to carve out the sphere of their work. ‘But the divide is not so clear cut, and that is why the worlds seem to collide at times,’ she said. ‘In some cases, we need to bring these different understandings together to get a whole perspective. Perhaps then, we won’t be so frightened that something we create as a copy of ourselves will be a [threat] to us.’

* terraforming: modifying a planet’s atmosphere to suit human needs

** singularity: the point when robots will be able to start creating ever more sophisticated versions of themselves

Look at the following statements (Questions 27–33) and the list of experts below.

Match each statement with the correct expert, A, B or C.

NB You may use any letter more than once.

27. For our own safety, humans will need to restrict the abilities of robots.
28. The risk of robots harming us is less serious than humans believe it to be.
29. It will take many decades for robot intelligence to be as imaginative as human intelligence.
30. We may have to start considering whether we are treating robots fairly.
31. Robots are probably of more help to us on Earth than in space.
32. The ideas in high-quality science fiction may prove to be just as accurate as those found in the work of mediocre scientists.
33. There are those who look forward to robots developing greater intelligence.

List of Experts
A. Martin Rees
B. Daniel Wolpert
C. Kathleen Richardson

Complete each sentence with the correct ending, A–D, below.

34. Richardson and Rees express similar views regarding the ethical aspect of

35. Rees and Wolpert share an opinion about the extent of

36. Wolpert disagrees with Richardson on the question of

- A. robots to explore outer space.
- B. advances made in machine intelligence so far.
- C. changes made to other planets for our own benefit.
- D. the harm already done by artificial intelligence.

Questions 37–40

Choose the correct letter, A, B, C or D.

37 What point does Richardson make about fear of machines?

- A. It has grown alongside the development of ever more advanced robots.
- B. It is the result of our inclination to attribute human characteristics to non-human entities.
- C. It has its origins in basic misunderstandings about how inanimate objects function.
- D. It demonstrates a key difference between human intelligence and machine intelligence.

38 What potential advance does Rees see as a cause for concern?

- A. robots outnumbering people
- B. robots having abilities which humans do not
- C. artificial intelligence developing independent thought
- D. artificial intelligence taking over every aspect of our lives

39. What does Wolpert emphasise in his response to the question about science fiction?

- A. how science fiction influences our attitudes to robots
- B. how fundamental robots are to the science fiction genre
- C. how the image of robots in science fiction has changed over time
- D. how reactions to similar portrayals of robots in science fiction may vary

40. What is Richardson doing in her comment about reality and fantasy?

- A. warning people not to confuse one with the other
- B. outlining ways in which one has impacted on the other
- C. recommending a change of approach in how people view them
- D. explaining why scientists have a different perspective on them from other people

答案:

1、potatoes 2、butter 3、meat 4、crystals 5、cellophane 6、tin 7、refrigerator

8. NG 9.T 10.F 11.T 12.F 13.NG

Test3–writing–task1

You should spend about 20 minutes on this task.

The charts below give information about a public library in a town called Little Chalfont.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words

Little Chalfont Library

Age of library members (2016)

Total loans by category (2016)

Children's fiction	38%
Children's non-fiction	6%
Children's DVDs	1%
Young adults	2%
Adult fiction	38%
Adult non-fiction	13%
Adult audio books	2%

Total number of loans (2007–2016)

Test3–writing–task2

You should spend about 40 minutes on this task. Write about the following topic:

Some people have decided to reduce the number of times they fly every year or to stop flying altogether.

Do you think the environmental benefits of this development outweigh the disadvantages for individuals and businesses?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

小作文【考生范文】

This is an answer written by a candidate who achieved a **Band 5.0** score.

The illustration show information about a public library in a city which called Little Charfont. The member of library is mostly compose by Adults. It is around in half, the rawest is adults 65 and over.

Fiction is the most popular category either children or adults. Both of them are recorded by 38%. Whereas, nonfiction is less popular than fiction. It is 13% and 6% for children. The visualisation's categories, such as DVDs and audio books are lowest in the same binding which is total number of loans.

The bar is starting as the lowest in 2007. It is about 15,000. However, It has been slowly rised up until 2011. Unfortunately, It is likely to decrease as 2009 during 2012 to 2013. Nevertheless, It has been surprisingly increased by 2016. In 2016, It break new record In the chart. It could be about 21,000!

【考官评语】

Here is the examiner's comment:

This response does present data for each of the charts, and generally answers the question. There is limited detail though, for example, when describing the pie chart for the age of library members, we are told that the members are mostly

adults, and those 65 and over are the [rawest]. There is no mention of children and young adults, and no reporting of the data in the pie chart itself. This means that only limited details are presented.

Ideas are organised, and there is an underlying sense of meaning but some lack of progression. Sentences are not fluently linked to each other. Cohesive devices tend to be overused [which | Both | such as | However | Unfortunately | Nevertheless], and some are faulty [Wheras / Whereas]. There is some reference [It], but this is used repetitively, especially in the last paragraph.

There is an attempt to use a range of vocabulary [less popular | visualisation's | break new record]; however, overall, the frequency of error, and the mistakes in word choice [rawest / lowest | binding /?] limit the score for vocabulary. The range of grammatical structures is also limited. The response should be written using past tenses, as the data covers 2007 to 2016, but is mostly written in the present tense. Sentences are generally short, and the level of error is noticeable for the reader.

This response could be improved by including an appropriate overview, and providing greater accuracy across vocabulary and grammatical structures.

Example overview

In Little Chalfont Library, 2016, the majority of members were adults, with the most loans in the fiction category. Overall, from 2007 to 2016, loans increased to their highest level across the 10-year period shown.

【参考翻译】

这篇写作确实呈现了每张图表的数据，也基本回答了题目要求的问题。但描述内容细节有限。例如，在描述图书馆会员年龄分布的饼图时，文中提到“会员主要是成年人”，

并且“65 岁及以上的人是[rawest]”。这里没有提到儿童和年轻人的情况，也没有具体报告饼图中的任何数据。因此，整体细节呈现较为有限。

文章思路有一定的组织性，也能传达出基本含义，但在逻辑推进方面略显不足。句子之间的衔接不够流畅。连接词使用上存在过度使用现象 [which | Both | such as | However | Unfortunately | Nevertheless]，有些使用也不正确 [Wheras / Whereas]。文中也有一些指代表达 [It]，但使用重复，特别是在最后一段中尤为明显。

词汇方面有一些尝试使用较高级词语的努力 [less popular | visualisation's | break new record]；然而，由于错误较多，以及用词不当的问题 [rawest / lowest | binding / ?]，影响了词汇项的得分。

语法结构的多样性也较为有限。整篇文章应使用过去时态，因为所描述的数据覆盖的是 2007 年至 2016 年这段时间，但大部分内容却使用了现在时态。句子普遍偏短，语言错误对读者来说也比较明显。

若想提升分数，考生应在文章中加入一个合适的总体概述，并在词汇和语法结构的使用上提高准确性。

参考概述示例：

在 Little Chalfont 图书馆 2016 年的数据中，大多数会员为成年人，其中小说类图书的借阅量最多。总体来看，从 2007 到 2016 年，图书借阅量在这十年间达到了最高水平。

大作文【考生作文】

This is an answer written by a candidate who achieved a **Band 7.5** score.

Many people nowadays have decided to stop flying or to limit the amount of times they use this form of transport. This will undoubtedly have great benefits for the environment, but it may mean that for individuals or businesses this can translate to higher expenses. I believe the disadvantages for individuals and businesses

would be greater than the effects on the environment. This essay will discuss advantages and disadvantages of this

Environmental benefits of reduced airtravel would have a direct effect in the amount of pollution in the air, which would mean a greener planet. However, this would also mean a rise in the use of other types of transportation. For example, if the amount of cars, buses or trucks on the road increases this also means greenhouse gas emissions increase too.

On the other hand, for individuals or businesses this could mean higher travelling costs, as well as lengthy trips and possible delays in reaching their destinations. All of this can affect the companies resources and even possibly cause them to lose business deals, or not even commence them due to restricted trading times. Higher costs for companies can cause job cuts which can have devastating effects for families.

In conclusion, I believe the disadvantages on individuals and businesses caused by

a reduction in air travel are far greater. The potential implications for companies of higher travel and shipping costs, could reflect losses that can eventuate in job cuts. The effects on the environment would not be enough to merit such a drastic culture change and possibly pollution levels could rise as a result of the increase on other contaminants.

【考官评语】

Here is the examiner's comment:

This is a strong, detailed and well-developed response. There are several appropriate ideas; the position is presented in the first paragraph and it is

evidenced consistently. To improve this response, there could be more detail on the impact on ‘individuals’ as most of the examples refer to ‘businesses’.

The ideas are organised logically and the paragraphs support overall coherence.

Cohesion is used well throughout, and the message can be followed easily.

Vocabulary is fluently and flexibly used [translate to higher expenses | devastating effects | potential implications] with accurate spelling and only occasional errors in word choice [commence them / start them | eventuate in / result in]. Similarly, the range of grammatical structures is wide. There are frequent multi-clause sentences and the response is mostly error free.

【参考翻译】

这是一篇内容充实、细节丰富且发展充分的回答。文中提出了多个恰当的观点，立场在第一段就已明确表达，并在全文中得到了持续的支持和论证。若想进一步提升文章质量，考生可以在“对个人的影响”方面提供更多细节，因为目前大部分例子集中在“企业”方面。

文章思路组织清晰，段落安排合理，整体连贯性强。衔接手段运用得当，全文逻辑流畅，读者可以轻松理解作者的思路。

词汇使用流畅而灵活，例如 [translate to higher expenses | devastating effects | potential implications]，拼写基本准确，仅有个别词语选择上的小问题 [commence them / start them | eventuate in / result in]。语法结构也展现出较广的多样性，文中频繁出现包含多个从句的复合句，整体语言错误很少。

Test3–speaking–task1

Test 3-Part 1

Please answer the questions 1-4

1. Did you enjoy going to museums when you were a child?
2. Are there any interesting museums near where you live now?
3. Do you think it is best to go to museums by yourself or with friends?
4. When you visit another city or country, do you think it's important to go to a museum there?

Test 3-Part 2

Please answer the question

Describe a piece of work you did for your job or your studies that you felt very satisfied with.

You should say:

what this piece of work was

why you did this piece of work

who or what helped you to do this work

and explain why you felt so satisfied with this piece of work.

Test 3-Part 3

Please answer the questions 1-6

1. What are some aspects of people's lives that they can often be dissatisfied with?
2. Would you say that having ambitions in life is always a positive thing?
3. What do you believe the most important components are of a satisfying life?
 1. What makes a job more satisfying: a high salary or having good colleagues?
 2. Do you think people need to change jobs regularly if they want to stay satisfied at work?
 3. Is it possible to find job satisfaction in all types of work?

答案:

1. Well, when I was a kid, I wasn't really into museums, to be honest. I mean, they always felt kind of quiet and, you know, a bit boring for a little kid who just wanted to run around and have fun. But I do remember going on some school trips to museums, and back then, I kind of enjoyed it just because I got to hang out with my classmates.

2. Oh yes, there're a couple of them not far away from my place. For example, there's a local history museum that showcases the area's development over the years. It's an absolutely fascinating place to go if you're into history or want to know more about the region. And there's also an art museum that often holds exhibitions from contemporary artists. It's a great place to visit if you're fond of modern art.

3. Well, I think going to museums by myself is probably the best choice. I mean, when I go alone, I can take my time and really lose myself in the exhibits I find interesting. There's no rush, no pressure to keep up with someone else's pace. Sometimes I even stop and read all the little signs next to the artwork, which is something I probably wouldn't do if I were with friends.

4. Well, I think it's a pretty good idea to do so. I mean, museums kind of help you get a feel for the local culture. Like, you can learn about the city's past or see what kind of art people there care about. It's also a nice way to slow down during a trip and just enjoy something different. So yeah, I wouldn't say it's a must, but it's definitely worth checking out if you have time.

Well, one piece of work that I felt really satisfied with during my studies was when I had to write a research paper for one of my university courses. It was about language acquisition and how children learn languages in their early years.

I chose this topic because, you know, I've always been really curious about how people pick up languages, especially when they're young. Also, it was something that really tied into what I wanted to do in my career, teaching English, you know. So, I thought it would be a great opportunity to explore the topic more deeply.

Speaking of the help that I got, well, I had some great resources to help me out. First of all, my professor was super supportive, who gave me lots of guidance and pointing me in the right direction when I got stuck. I also spent quite a bit of time in the library reading academic papers and books, which gave me a lot of ideas and food for thought in this area. But what inspired me the most was the discussions that I had with my classmates. We often bounced ideas off each other, and I think this kind of collaboration really helped me refine my thoughts.

Why did I feel satisfied? Well, it was partly because all the hard work paid off. I ended up getting a pretty good grade on the project. But honestly, it wasn't just about the grade. I mean, I was pleasantly surprised by how well I did, but what meant even more to me was the process itself. The research, the writing, the feedback, all of them came together in a way that really taught me a lot. It felt incredibly rewarding to see how everything clicked in the end, and more than anything, it was the sense of growth I experienced that made the whole thing so satisfying.

part3

1. Well, I think one area people really feel dissatisfied with is their career. You know, a lot of people might feel like they're stuck in a job that doesn't match their interests or doesn't pay enough. And when you're doing the same thing every single day without a sense of progress, it's obviously hard to stay motivated and satisfied. Also, many people struggle with balancing their job and personal life. I mean, working long hours can leave you with little time or energy for your family, hobbies, or even just rest. Over time, that kind of lifestyle can make people feel really frustrated or even burnt out.

2. Well, I wouldn't say that having ambitions is always a positive thing. I mean, on one hand, ambition pushes people to grow, to achieve more, and to aim higher in life. It's definitely a driving force behind success. But on the other hand, if someone becomes too obsessed with their goals, they might ignore their health, relationships, or even lose sight of what really makes them happy. It can lead to, you know, a lot of stress and burnout,

especially if they're constantly comparing themselves to others. So yeah, ambition can be great, but only if it's balanced with self-care and realistic expectations.

3. Well, for me, one of the most important ingredients is having meaningful connections with other people. I mean, strong social bonds with family, friends, and even the wider community provide a sense of belonging and support that is crucial for our well-being. Feeling connected and having people to share your life with, you know, that makes a huge difference. Another vital component I would say is having a sense of purpose. Well, it doesn't necessarily need to be some grand, world-changing goal, but rather feeling like you're contributing something, whether it's through your work, your hobbies, or your involvement in your community. This feeling of contribution can be incredibly satisfying, and that is also what makes life rewarding and meaningful.

1. Well, that's a difficult question. I mean, both are important in different ways. But if I had to choose, I'd probably say having good colleagues can gain you more job satisfaction. I mean, when you work with people who are friendly, supportive, and easy to get along with, it really helps you enjoy your day, even if the job itself is stressful. Of course, a high salary is important too. It gives you a sense of security and allows you to enjoy life outside of work, but let's be honest, if you're surrounded by toxic workmates, even a well-paid job can feel like a nightmare. So yeah, I'd say a good team often matters more than money, at least in the long run.

2. Well, I think it really depends on the person and the type of job they have. I mean, some people feel more satisfied when they face new challenges and get to learn different skills, so changing jobs from time to time helps them stay motivated and avoid getting bored. But others might prefer stability and a clear career path, and they feel more fulfilled when they can grow deeper in one role over time. What I want to say is, not everyone wants to start over again and again. So, I'd say people don't necessarily need to change jobs on a regular basis to feel satisfied, but for some, it can be a good way to keep things fresh and exciting.

3. Well, I guess it is possible, but not everyone will find it easy. I mean, job satisfaction is a really personal thing. Some people can feel satisfied even in very basic or repetitive jobs, as long as they feel they're doing something rewarding or working with people they like. Take a cleaner or a delivery person for example, their jobs might not seem that exciting or glamorous, but if the work environment is supportive and they feel respected, it can also make a huge difference. So yeah, I think people can find satisfaction in most kinds of work with the right mindset and environment. But of course, it's not always that simple.
