12

- 11 clubhouse
12 picnic
13 prizes

SECTION 2

Good evening everyone and thank you for coming to the Soccer Club meeting. It's good to see so many parents and children here tonight, and I know you are looking forward to a great football season. Now I'd like to take a few minutes to tell you about some changes to the Soccer Club for the coming season.

Now, this season we'll be playing all our matches for both the junior and senior competitions at King's Park, instead of Royal Park, which was used last season.

Now for meetings, we're going to use the clubhouse in King's Park, and the next meeting will be held in the clubhouse on the 2nd of July. Q11

As usual, we hope to begin the season with a picnic next Saturday at the clubhouse. Please try and come to the picnic as it's always good fun. The last week of the season we usually have a dinner and presentation of prizes to the players, and more information about this will be given to you later in the season. Q12 Q13

25

Tidal energy

Tides are more 35 than waves

Planned tidal lagoon in Wales:

- will be created in a 36 at Swansea
- breakwater (dam) containing 16 turbines
- rising tide forces water through turbines, generating electricity
- stored water is released through 37 , driving the turbines in the reverse direction

Advantages:

- not dependent on weather
- no 38 is required to make it work
- likely to create a number of 39

Problem:

- may harm fish and birds, e.g. by affecting 40 and building up silt

Ocean thermal energy conversion

Uses a difference in temperature between the surface and lower levels

Water brought to the surface in a pipe

27

Producing enough energy to meet our needs has become a serious problem. Demand is rising rapidly, because of the world's increasing population and expanding industry. Burning fossil fuels, like gas, coal and oil, seriously damages the environment and they'll eventually run out. For a number of years now, scientists have been working out how we can derive energy from

Q31

Introduction

More energy required because of growth in population and 31

What's needed:

- renewable energy sources
- methods that won't create pollution

Wave energy

Advantage: waves provide a 32 source of renewable energy

Electricity can be generated using offshore or onshore systems

Onshore systems may use a reservoir

Problems:

- waves can move in any 33
- movement of sand, etc. on the 34 of the ocean may be affected and Mighty Whale, and research is going on to try and come up with a really efficient method. This form of energy has plenty of potential, as the source is constant, and there's no danger of waves coming to a standstill. Electricity can be generated using onshore systems, using a reservoir, or offshore systems. But the problem with ocean waves is that they're erratic, with the wind making them travel in every direction. This adds to the difficulty of creating efficient technology: ideally all the waves would travel smoothly and regularly along the same straight line. Another drawback is that sand and other sediment on the ocean floor might be stopped from flowing normally, which can lead to environmental problems.

Tidal energy

Tides are more **35** than waves

1/9/2020

Planned tidal lagoon in Wales:

- will be created in a **36** at Swansea
- breakwater (dam) containing 16 turbines
- rising tide forces water through turbines, generating electricity
- stored water is released through **37** , driving the turbines in the reverse direction

The second category of marine energy that I'll mention is tidal energy. One major advantage of using the tide, rather than waves, as a source of energy is that it's predictable: we know the exact times of high and low tides for years to come.

Q35

For tidal energy to be effective, the difference between high and low tides needs to be at least five metres, and this occurs naturally in only about forty places on Earth. But the right conditions can be created by constructing a tidal lagoon, an area of sea water separated from the sea.

One current plan is to create a tidal lagoon on the coast of Wales. This will be an area of water within a bay at Swansea, sheltered by a U-shaped breakwater, or dam, built out from the coast. The breakwater will contain sixteen hydro turbines, and as the tide rises, water rushes through the breakwater, activating the turbines, which turn a generator to produce electricity. Then, for three hours as the tide goes out, the water is held back within the breakwater, increasing the difference in water level, until it's several metres higher within the lagoon than in the open sea. Then, in order to release the stored water, gates in the breakwater are opened.

Q36

Q37

It pours powerfully out of the lagoon, driving the turbines in the breakwater in the opposite direction and again generating thousands of megawatts of electricity. As there are two high tides a day, this lagoon scheme would generate electricity four times a day, every day, for a total of around 14 hours in every 24 – and enough electricity for over 150,000 homes.

博@何琼

29

腾讯课堂

Advantages:

- not dependent on weather
- **no 38** is required to make it work
- likely to create a number of **39**

2020

Problem:

- may harm fish and birds, e.g. by affecting **40** and building up silt

Ocean thermal energy conversion

Uses a difference in temperature between the surface and lower levels
Water brought to the surface in a pipe

This system has quite a lot in its favour: unlike solar and wind energy it doesn't depend on the weather; the turbines are operated without the need for fuel, so it doesn't create any greenhouse gas emissions; and very little maintenance is needed. It's estimated that electricity generated in this way will be relatively cheap, and that manufacturing the components would create more than 2,000 jobs, a big boost to the local economy.

Q38

Q39

On the other hand, there are fears that lagoons might harm both fish and birds, for example by disturbing migration patterns, and causing a build-up of silt, affecting local ecosystems.

Q40

There are other forms of tidal energy, but I'll go on to the third category of marine energy: ocean thermal energy conversion. This depends on there being a big difference in temperature between surface water and the water a couple of kilometres below the surface, and this occurs in tropical coastal areas. The idea is to bring cold water up to the surface using a submerged pipe. The concept dates back to 1881, when ...

SECTION 4 Questions 31–40

Complete the notes below.

Write **ONE WORD ONLY** for each answer.**Conflict at work**Conflict mostly consists of behaviour in the general category of **31**Often a result of people wanting to prove their **32**

What is conflict in the workplace? Definitions vary, but I'm taking it to refer to a whole range of behaviours that the victim finds unacceptable, from minor, harmless arguments to – at the opposite extreme – physical violence. Much of this is covered by the term bullying, by which I mean one or more people behaving abusively or aggressively against another who is in a weaker position. Although all behaviour like this is a form of conflict, not all conflict can be described in these terms. Q31

As with all human behaviour, there are numerous reasons for it. But often it's caused by someone who feels the need to show their superiority over someone else, in order to feel that they aren't at the lowest level in a hierarchy or a group of people. Q32
